Hi Amol,

I have the queen of Stanford premed standing by to spam. I'll send once you give the OK.

Halo Neuro is seeking two life science undergraduates to join on as researchers.

Halo Neuro, founded by Stanford alumni Dan Chao, MD (Co-founder of Lumos Catheter, head of regulatory and strategy for NeuroPace) and Amol Sarva, PhD (Co-founder of Virgin Mobile USA and of the smartphone platform Peek), is on the cutting edge of neuro-enhancement. We are currently developing a device that uses transcranial direct-current stimulation (tDCS) to improve brain function (<http://www.nature.com/news/2011/110413/full/472156a.html>).

The work will be part-time, and you will be working closely with Dr. Chao in Palo Alto as the sixth and seventh members of our team. Much of the work can be done remotely.

Please address inquiries to Davidr44@alumni.stanford.edu.

Best, David Rosenthal, Research Fellow, Halo Neuro

-David

Are you planning to give the researchers a stipend? I said it was a "job opportunity" but just realized this night not be the most accurate description.

To: David Rosenthal <rosenthal.dleon@gmail.com>, Daniel Chao <daniel@haloneuro.com>

Cool. Not sure. Lets ask Dan

We want a pipeline...

david - great work. some edits - changed alumni to alumnus since amol went to stanford as well, changed - enhancement to -modulation. cleaned up my title at neuropace. took out the part on working remotely as i do not want to set that expectation. should be considered a an earned privilege to work from home. not sure if we want to restrict ourselves to the life sciences. a CS student would be a nice addition. does your contact at stanford have access to that department?

amol - i have some ideas on the intern team. let's chat today to catch up on this and a bunch of other stuff.

Halo Neuro is seeking two {{{life science}}} undergraduates to join on as researchers.

Halo Neuro, founded by Stanford alumnus Daniel Chao, MD (Co-founder of Lumos Catheter Systems, head of business development for NeuroPace) and Amol Sarva, PhD (Co-founder of Virgin Mobile USA and of the smartphone platform Peek), is on the cutting edge of neuromodulation. We are currently developing a device that uses transcranial direct-current stimulation (tDCS) to improve brain function (<http://www.nature.com/news/2011/110413/full/472156a.html>).

The work will be part-time, and you will be working closely with Dr. Chao in Palo Alto as the sixth and seventh members of our team. Please address inquiries to Davidr44@alumni.stanford.edu.

I'll blast a CS list with the updated email--the departmental secretary should be able to send it out for me.

Cool.

I do already have about 10 bites from the premed pool--let me know how you'd like me to proceed with them too.

-David
